

Company Policy

Innovation and advanced production methods are the main rationale for our high quality products. Active environmental protection, occupational safety and the observance of ethical principles are the pillars of all activities of elobau. These are our conditions for sustainable success in the market.

With continuous assessment of customer's needs and monitoring of the market, we ensure long-term and stable relationships.

We consider environmental aspects when developing designs and in the construction of our carbon neutral products as well as in our purchasing and production processes. Based on these criteria we minimize environmental pollution by economical handling of resources and a continuous reduction of our environmental impact such as energy consumption, waste, waste water and noise. Our long term aim is to create a wholly sustainable enterprise, far beyond current industrial standards.

Besides our deep rooted environmentalism we go ahead with the implementation of systematic feedback systems and renewable energy sources.

For elobau the compliance with current regulatory environment and quality standards is just as self-evident as the assurance of consistently high product quality. When meeting customer's requests we guarantee transparent and clearly laid out processes in compliance with best practice. Evaluation as well as consequent traceability of all relevant processes is the origin for continuous improvement and inspection of the enduring competency of the quality management system.

Our employees are the basis of our success. Trained employees contribute with their experience and their ideas to continuous improvements and practical solutions. Every employee is expected to implement quality and environmental protection into practice.

elobau's management ensures a continuously improved management system. Appropriate financial means will be provided.

Leutkirch, August 05th 2011

General Director

elobau goes green.
