## Update zu EU Standards (2002/95)EG-RoHS) & (2003/11/EG WEEE)

Dear Sirs,

We would like to inform you that we use for all soldering processes at elobau (soldering by hand, wave soldering and SMD) non-leaded raw materials and thus producing according to RoHS.

Except a very few specific electronic components, all parts which have been mounted in our devices since 1<sup>st</sup> January 2006 are non-leaded. However, some of our sub-suppliers are still not in the position to deliver the non-leaded succeeding types. But as already said before, this concerns only very few "exotic" components. Since 1<sup>st</sup> January 2006, all reed contacts which have been assembled in elobau parts are non-leaded.

Due to our diversified delivery programme it is, unfortunately, not possible for us to answer directly to individual product inquiries or to establish a new initial sample inspection report.

Thank you for your understanding.

Kind regards,

elobau Elektrobauelemente  
GmbH & Co.KG

Roland Karrow  
Quality Manager
