

Tilt sensor N7 dynamic CAN

The N7 dynamic tilt sensor is available in CANopen or SAE J1939 versions. Due to its robust design and high resistance to shock and vibration, it is often used to measure inclination in construction machinery, agricultural machinery, industrial trucks and harsh industrial environments. Enhanced with a highly responsive blend of accelerometer and gyroscope, this combination effectively minimizes the impact of abrupt movements, guaranteeing the delivery of accurate measurement data.

N7 dynamic – developed for even greater safety, reliability, functionality and flexibility.

- High precision, even with fast movements, strong vibrations and shocks
- Inertial Measurement Unit (IMU)
- Output of acceleration, rotation rate and inclination
- Precise signals for dynamic movements thanks to sensor fusion
- EMC standards in accordance with off-highway standards (EN ISO 14982; DIN EN ISO 13766-1; DIN EN 12895)
- Robust design for a long service life: protection class IP6K7 (ISO 20653) / IP6K9K (ISO 20653)
- Temperature-resistant from -20 °C to +85 °C (-40 °C to +85 °C on request)
- Connector types: Deutsch DT04-08PA, 1x M12 5-pin (male) or 2x M12 5-pin (male/female)
- Daisy-Chain – Looping through the CAN signal without additional T-distributors
- Fast installation thanks to efficient 2-point mounting
- Smart variant management thanks to a clever modular system
- E1 type approval for road approval
- Parameter sets customised to the application to increase performance/accuracy (on request)
