Mini Armrest 150MA

As machine complexity rises, modular platforms help OEMs reduce engineering effort, accelerate time-to-market and retain flexibility across machine families and product generations.

The evolution from the Midi to the Mini reflects this industry trend: modular concepts complement bespoke solutions by extending proven, future-ready architectures to more applications and simplifying complexity management across entire machine platforms.

Every milimeter under control

with our Mini Armrest 150MA. The 150MA Mini Armrest transfers the proven strengths of the Midi platform into a compact format.

Designed for space-constrained applications, it retains electronic integration, modularity and machine-specific configurability on a shared technical foundation, balancing standardisation with customisation.
